SUBJECT INDEX

D. Soil Properties: Laboratory and Field Determinations

2. *Physico-chemical Properties (including corrosion, thixotropy)*

- Sulfate action on concrete in Winnipeg soils. Whitehead, M. B. *et al.*, 49.
- Sulfate action on concrete in Winnipeg soils. Discussion by Quigley, R. M., 61.
- Sulfate action on concrete in Winnipeg soils. Discussion by Mackey, A. C., 213.

5. *Compressibility (including consolidation and swelling)*

- A fluid settlement gauge. Bozozuk, M., 362.
- Anisotropic consolidation of Leda Clay. Walker, L. K. and Raymond, G. P., 271.
- Consolidation of layered clays. Barden, L. and Younan, N. A., 413.
- Pressure plate apparatus for volumetric measurement of suction, swelling pressure, and consolidation in clay soils. Chang, R. K., 209.
- Secondary settlement in sensitive clays. Discussion by Walker, L. K., 219.

6. *Shear-deformation and Strength Properties (including pore-water pressure)*

- A lateral deformation transducer for triaxial testing. Holubec, I. and Finn, P. J., 353.
- Elastic and slip components of the deformation of sand. Barden, L., Khayatt, A. J., and Wightman, A., 227.
- Some observations on the undrained shearing strength used to analyze a failure. DeLory, F. A. and Salvas, R. J., 97.
- The effective stress response of a saturated clay soil to repeated loading. Sangrey, D. A., Henkel, D. J., and Esrig, M. I., 241.
- The pore pressure - strain relationship of normally consolidated undisturbed clays. Part I. Theoretical considerations. Lo, K. Y., 383.
- The pore pressure - strain relationship of normally consolidated undisturbed clays. Part II. Experimental investigation and practical applications. Lo, K. Y., 395.

E. Analysis of Soil-Engineering Problems

2. *Deformation and Settlement Problems (including piles)*

- A fluid settlement gauge. Bozozuk, M., 362.
- Behavior of an overpass carried on footings and friction piles. Brzezinski, L. S., 369.
- Construction method and stability of embankments on muskeg. Raymond, G. P., 81.
- Dykes on permafrost, Kelsey Generating Station, Manitoba. Johnston, G. H., 139.
- New pile force gauge. Fellenius, B. H. and Haagen, T., 356.
- Settlement of a high embankment and overpass structures in Ottawa. Burn, K. N., 33.
- Settlement of a high embankment and overpass structures in Ottawa. Discussion by McRostie, G. C., 45.
- Unusual movements of abutments supported by end-bearing piles. Discussion by Bjerrum, L., 366.
- Unusual movements of abutments supported on end-bearing piles. Discussion by Squier, L. R. and Fujitani, K. F., 215.

4. *Bearing Capacity of Piles*

- Comparison of pile load-test - skin-friction values and laboratory strength tests. Watt, W. G., Kurfurst, P. J., and Zeman, Z. P., 339.
- Foundation anchor piles in clay-shales. Jaspar, J. L. and Shtenko, V. W., 159.

5. *Earth Pressure Problems (including silos)*

- A study of the trap-door problem in a granular mass. Ladanyi, B. and Hoyaux, B., 1.
- A study of the trap-door problem in a granular mass. Discussion by Meyerhof, G. G., 15.

- A study of the trap-door problem in a granular mass. Reply to Meyerhof, G. G., Ladanyi, B. and Hoyaux, B., 441.
- Earth pressures on Ottawa outfall sewer tunnel. Eden, W. J. and Bozozuk, M., 17.
6. *Stability of Slopes, Cuts, and Excavations*
Some observations on the undrained shearing strength used to analyze a failure. DeLory, F. A. and Salvas, R. J., 97.
7. *Seepages and other Hydraulic Problems (including erosion)*
On the effectiveness of sand drains. Casagrande, L. and Poulos, S., 287.
8. *Dynamic Problems*
Influence of soil-structure interaction on the earthquake response of buildings. Singhal, A. and Tahiani, C., 177.
Influence of soil-structure interaction on the earthquake response in buildings, by Arinash Singhal and Claude Tahiani. Discussion by Rainer, J. H., 443.
9. *Frost Action and Heat Transfer Problems*
Adfreezing of Leda clay to anchored footing columns. Penner, E. and Irwin, W. W., 327.
10. *Behavior of Base Courses and Pavements*
Vertical movements and crack-width changes on highway pavement surfaces. Rix, H. H., 253.

H. Design, Construction, and Behavior of Engineering Works

1. *Foundations of Structures (buildings, bridges, tanks etc.)*
Behavior of an overpass carried on footings and friction piles. Brzezinski, L. S., 369.
Comparison of pile load-test — skin-friction values and laboratory strength tests. Watt, W. G., Kurfurst, P. J., and Zeman, Z. P., 339.
Design of foundations on Winnipeg clay. Baracos, A., 197.
Effects of environment on the performance of shallow foundations. Hamilton, J. J., 65.
Foundation anchor piles in clay-shales. Jaspar, J. L. and Shtenko, V. W., 159.
Foundation anchor piles in clay-shales. Discussion by Peterson, R., 175.
Influence of soil-structure interaction on the earthquake response of buildings. Singhal, A. and Tahiani, C., 177.
Selection and performance of anchors for guyed transmission towers. Robinson, K. E. and Taylor, H., 119.
Selection and performance of anchors for guyed transmission towers. Discussion by Insley, A. E., 135.
Sulfate action on concrete in Winnipeg soils. Whitehead, M. B. *et al.*, 49.
4. *Earthworks, Embankments, Fills and Dams*
Construction method and stability of embankments on muskeg. Raymond, G. P., 81.
Dykes on permafrost, Kelsey Generating Station, Manitoba. Johnston, G. H., 139.
On the effectiveness of sand drains. Casagrande, L. and Poulos, S., 287.
Settlement of a high embankment and overpass structures in Ottawa. Burn, K. N., 33.
5. *Underground Structures (including tunnels, conduits, and shafts)*
Culvert elongations in fills founded on soft clays. Hughes, J. M. O., 111.
Earth pressures on Ottawa outfall sewer tunnel. Eden, W. J. and Bozozuk, M., 17.
Earth pressure on Ottawa outfall sewer tunnel. Discussion by Meyerhof, G. G., 365.
6. *Base Courses and Pavements of Roads, Railroads, and Airfields*
Vertical movements and crack-width changes on highway pavement surfaces. Rix, H. H., 253.
